BizzEngager

Product Overview

The Core Problem

Large companies that sell through networks of dealers, distributors, and retailers face a recurring distribution problem: when a new product launches, getting a consistent, branded product image out to every partner - each ideally personalized with that partner's name, designation, and logo - is a manual, slow, and inconsistent process today.

How BizzEngager Solves It

BizzEngager automates this end to end, in four stages:

- Design - a company builds a base "frame" (a product image or layout) using a built-in design editor, with shapes, icons, photos, and curated presets.
- Personalize - dynamic fields (dealer name, designation, company logo, and any other custom field) are mapped onto the frame, so one base design can be automatically rendered once per contact.
- Map contacts - the company's dealer/distributor/retailer database is uploaded and tagged, so campaigns can target specific segments.
- Deliver - the personalized image is sent through WhatsApp, Email, and/or SMS - the company can choose one channel or all three for a given campaign.

Two-Panel Architecture

BizzEngager is split into two control panels with distinct audiences:

- Superadmin Panel - operated by the platform owner. Governs the companies (tenants) on the platform, the shared library of shapes and presets, channel provider configuration, credit pricing, and platform-wide settings.
- Admin Panel - operated by each client company. Used to manage that company's own contacts, build frames, run campaigns, manage its wallet/credits, and configure its own channel provider accounts.

The two panels share a clear hand-off: the Superadmin curates the shape and preset library; companies consume that library inside their own Frame Editor to build campaigns.

Navigation

Both panels share the same eight-item structure, which keeps the platform easy to learn whether someone is operating as the Superadmin or as a company admin.

Superadmin Panel	Admin (Company) Panel
Dashboard	Dashboard
Analytics & Reporting	Contacts
Companies	Frame
Channel Configuration	Campaign
System Logs	Wallet
Transaction Logs	Channel Integration
Presets & Shapes	Activity & Logs
Settings	Settings

Part A - Superadmin Panel

The Superadmin panel is BizzEngager's control center for the platform owner: managing every client company, the shared design library, channel providers, credit pricing, and platform-wide configuration.

1. Dashboard

- Dynamic welcome message showing the logged-in Superadmin's name.
- Global date range filter - Last Week, Last Month, Last Year, or Custom - applied to every statistic on the page.
- Total Companies, with growth percentage versus the equivalent prior period (e.g., a 7-day range is compared against the previous 7 days).
- Total Revenue, with the same period-over-period growth comparison.
- Error logs panel.
- Revenue chart.
- Users/Companies activity chart.
- Total presets added by the Superadmin.

2. Analytics & Reporting

- Revenue - Average Revenue per User (ARPU).
- Companies - active companies, most active companies, and companies running low on credits.
- Total Frames - total frames created, broken down by user.
- Total Broadcasts - total broadcasts performed, broken down by user.
- Total Messages Sent - per user.
- Average Credit Usage - per user.
- A detailed per-user panel showing every statistic for a specific user.
- Credit usage breakdown per user/company.

3. Companies

Where the Superadmin manages every client company on the platform.

- Search bar.
- Filters - tag, start date, end date.
- "Add Company" action.
- Manage Tags popup - add a tag name; the tag listing shows Tag Name, Total Companies, and Date & Time, with Edit/Delete row actions.
- Add Company form fields - Tag(s) (required), Owner Name, Company Name (required), Mobile Number (required), Email Address (required), Company Address, Credits (manual assignment, optional), GST Number, Password.

- Listing columns - Company Name, Tags, Credits (with an inline "+ Add" action), Used Credits, Status, Email, Owner Name, Created Date.
- Row actions - Add Credit, Edit, Activate/Deactivate, Archive/Delete (archived companies can be restored within a recovery window), View (full detail across all fields), Login (sign in as that company).

4. Channel Configuration

Governs the messaging providers available platform-wide, across every channel companies can use in their campaigns.

- Three tabs - WhatsApp, SMS, Email.
- Listing (each tab) - Provider/Channel Name, Base URL / API Endpoint, Added/Updated Date & Time.
- Row actions - View, Edit, Delete.

5. System Logs

- Filters - Company Name, Start Date, End Date.
- Download Logs (Excel export).
- Login Logs tab - Company Name, Status, Email, Date & Time.
- Campaign Logs tab - Company Name, Email, Channel, Contacts, Date & Time.
- Error Logs tab - Company Name, Message, Date & Time.

6. Transaction Logs

- Search bar.
- Filters - Company Name, Status, Start Date, End Date.
- Download (Excel export).
- Listing columns - Invoice ID, Company Name, Status, Amount, Credit, Transaction Type, Date & Time.
- Row actions - View (full detail), Download (PDF).

7. Preset & Shape Management

Flagged in the original notes as the single most important module on the platform - it deserves the deepest design focus of any section here.

7.1 Presets

- The Superadmin can create, edit, and publish presets.
- A preset is a connected group of shapes - for example, a set of shapes linked together into one cohesive graphic (the original notes reference a sample "Balaji image" as an illustration of multiple connected shapes forming a single preset).

- Frames themselves are never treated as presets; when a preset is placed on a frame, that group of shapes sits on top of the frame.
- Text must be insertable inside every shape within a preset.
- Presets move through a Draft → Published → Archived workflow, so a new preset can be built and reviewed before it becomes visible inside every company's Frame Editor.
- Preset categories (Lower Thirds, Logo Circles/Badges, Callouts/Banners, and any new categories) are managed here, and become available in the Admin Frame Editor without a code release.
- We'll use the same editor for Superadmin - Editor details are mentioned in Admin panel

7.2 Shapes

- The Superadmin can add new shapes to the shared shape library.
- Shapes are added via direct SVG upload, using the same per-region recolor pipeline as the Admin Frame Editor's "Upload your own SVG" feature under Elements - one ingestion path for both the shared shape library and any custom shape an admin uploads, rather than maintaining a separate SVG path-configuration workflow.
- We'll use the same editor for Superadmin - Editor details are mentioned in Admin panel

8. Settings

8.1 Profile & Security

- Editable Superadmin account details.
- Sign-out option.
- Two-Factor Authentication (2FA), supporting both email verification and an authenticator app (TOTP) option.

8.2 Superadmin Management & Permissions

- Listing of Superadmin accounts - Name, Email, Created Date & Time, Last Login.
- Row actions - Edit, View, Delete.
- Search bar and "Add New" button.
- Add New popup - Name, Email, Password, Confirm Password, plus granular permission management across every module:
  - Companies - Add, Update, Delete, Special (anything beyond Add/Update/Delete).
  - Billing Management - View, Export.
  - System Logs - Login Logs, Error Logs, Campaign Logs, Special.
  - Preset Management - View, Add, Update, Delete, Special.

- Shapes - View, Add, Update, Delete, Special.
- Analytics - per-user analytics, View and Export.
- Version Update - View, Add.
- Notifications - View, Add.
- Credit Configuration - Element-based rules (View, Add, Update, Delete, Special); Credit charge (View, Add, Update, Special).
- Custom Field Management - View, Add, Update, Delete, Special.
- Channel Configuration - View, Add, Update, Delete, Special.

8.3 Version Update & Changelog

- Listing of past versions - Version ID, Version Name, Description.
- View action shows full detail, including the changelog.
- "Launch New Version" button and popup - Version Name, Version Description, Changelog, and a rollout target (All Companies, or a selected set of companies/tags) so a new version can be staged before a full rollout.

8.4 Notifications

- Listing of notifications previously sent by the Superadmin - Notification ID, Title, Description.
- View action for full detail on a given notification.
- "Send New Notification" button and popup - Title, Description, and a recipient target (All Companies, or a selected set of companies/tags).

8.5 Credit Configuration

- Element-Based Rules - configure credit cost rules based on which elements exist in a given frame.

Still needs a decision before this screen can be designed: should the cost of a rule be a flat amount per element, vary by element category, or scale with element count?

- Credit Cost Configuration - set the INR-to-credit conversion rate (for example, 1 INR = 1 Credit).

8.6 Custom Field Management

- Listing - Custom Field Name, Field Type, Scope (Superadmin - category-wise or all; or Admin).
- Row actions - Edit, Delete.
- "Add New Custom Field" button and popup - Field Name, Field Type, Field Scope.

Part B - Admin (Company) Panel

The Admin panel is what each client company uses day to day to run its BizzEngager activity: managing its dealer/distributor contact database, designing personalized frames, running multi-channel campaigns, and managing its credit wallet.

1. Dashboard

- Dynamic welcome message showing the company name.
- Global date range filter - Last Week, Last Month, Last Year, or Custom - applied to every statistic on the page.
- Total Contacts, Total Campaigns, Total Frames, Scheduled Campaigns.
- Delivered Ratio and Read Ratio.
- Channel integration status - WhatsApp accounts connected, Email configuration, SMS connections.
- Total campaign graph.
- Credit usage graph.

2. Contacts

- Search bar.
- Add Contact form - Tag selection, Business Name, Owner Name, Contact Number, Email, Business Logo (optional), and channel consent/opt-in status (WhatsApp / SMS / Email). These are the same fields included in the sample CSV download.
- Bulk Contact Upload - tag selection plus CSV upload.
- Bulk archive/delete.
- Manage Tags - add, update, delete.
- Manage Custom Fields - Field Name, Field Alias (auto-generated), Field Type, Required toggle, with update/delete.
- Filters - Tags, Date range.
- Listing columns - Tag Name, Business Name, Owner Name, Mobile Number, Consent Status, Date & Time.
- Row actions - View, Edit, Archive/Delete (archived contacts can be restored within a recovery window).
- View Contact - displays every configured field and its value for that contact.
- A contact who unsubscribes via a WhatsApp, SMS, or Email opt-out link is automatically marked opted-out for that channel and excluded from future campaigns on it.

3. Frames

- "Add Frame" button.
- Manage Categories.
- Search bar.
- Filters - Category, Date range, Aspect ratio/size.
- Listing columns - Image, Frame Name, Category, Size, Date & Time.
- Row actions - Edit, Duplicate, View, Archive/Delete (archived frames can be restored within a recovery window).
- Add Frame popup - Frame Name, Category, Size (aspect ratio).
- Manage Categories popup - add, update, delete category, with Date & Time.

Frame Editor

The core creative tool admins use to build a frame. The left panel holds five tabs, in this order: Arrange, Elements, Photos, Presets, Text. Canvas-level behavior - rulers, guides, zoom, right-click menus, page management, export, and undo/redo - sits outside the left panel and is assumed throughout, though not detailed item by item here.

A live credit estimate, driven by the Superadmin's Element-Based Rules, is shown persistently while a frame is being built, so cost is visible long before the Campaign Review step.

1. Arrange

1.1 Align

- Align to Frame (single object selected) - Left / Center / Right / Top / Middle / Bottom.
- Align to Selection (2+ objects - they align to each other, not the frame) - same six options, applied relative to the group.
- Align to Key Object - pick one object in the selection as the anchor; everything else aligns to it.
- Align to a Specific Point - type exact X / Y coordinates.
- Switch the reference point at any time - Selection, Frame, Key Object, or Custom point.

1.2 Distribute (spacing - requires 3+ objects)

- Distribute Horizontally / Vertically (equal edge spacing).
- Distribute Centers Horizontally / Vertically.
- Toggle distribution within the selection versus across the full frame.

1.3 Snapping & Guides

- Smart spacing guides while dragging - live gap distance, snaps when objects line up.
- Snap to grid (toggle plus grid size).

- Snap to margins / safe zones (toggle).
- Custom guide lines - drag off the ruler, place at an exact position, lock it.

1.4 Stacking Order

- Bring to Front / Bring Forward / Send Backward / Send to Back.

1.5 Position & Size Panel

- Numeric inputs - X, Y, Width, Height, Rotation.
- Lock aspect ratio toggle.
- Flip Horizontal / Flip Vertical.

1.6 Layers (sub-panel)

- Full layer list, front-to-back order, with drag to reorder.
- Rename any layer.
- Show/Hide and Lock/Unlock toggle per layer.
- Group selected layers / ungroup a group, with expand/collapse for nested groups.
- Multi-select layers for batch lock, hide, delete, or move.
- Thumbnail preview next to each layer.
- Two-way selection sync - clicking a layer selects it on canvas, and vice versa.
- Search/filter the layer list by name.

2. Elements

All kinds of SVG icons and shapes.

2.1 Categories

- Shapes - rectangle, circle, line, arrow, polygon, custom path, and more.
- Icons - line style, filled style, duotone style.
- Lines & Connectors.

2.2 Search & Browse

- Keyword search.
- "Recently Used" row.

2.3 Inserting

- Click to insert, drag-and-drop, or quick shape-tool shortcuts.

2.4 Editing an Element

- Recolor (vector elements) - one swatch per color region; click to change just that color.
- Recolor (raster/photo-based elements) - duotone, shadow plus highlight color.
- Outline/stroke - on/off, width, color, dash pattern.

- Corner rounding - drag a handle or type an exact value.
- Shadow/glow toggle.
- Flip/rotate - drag or type exact degrees.
- Crop - for frame-type or photo-based elements.
- Opacity slider.

2.5 Shape Combining

- Combine, Weld, Trim, Intersect, Simplify.

2.6 Custom Shapes

- Upload your own SVG - fully recolorable by region, and it behaves like any library shape.
- Draw a custom shape with a pen/path tool.

3. Photos

3.1 My Uploads

- Upload via drag-and-drop or file browser.
- Supported formats - JPG, PNG, WEBP, HEIC (auto-converted).
- Search uploads by filename.
- Delete.

3.2 Stock Images - Unsplash Only

- Search Unsplash's full library.
- Browse featured/trending content as the default view.
- Filter by orientation.
- Insert directly onto the canvas.
- All other stock image sources have been removed - Unsplash is the only external photo source.

3.3 Photo Editing (once a photo is on the canvas)

- Crop - free-form, or locked to a shape via a Frame element.
- Replace image - swap the picture while keeping its exact position, size, crop, and effects.
- Adjustments - brightness, contrast, saturation, temperature, sharpness.
- Preset filters, with manual sliders underneath.
- Flip / rotate.
- Border/outline around the photo.

4. Presets

Ready-made, multi-piece graphics - lower thirds, logo circles/badges, intro/outro cards, callout banners - curated and uploaded by the Superadmin, and fully editable once placed on the canvas.

- Presets are organized into two libraries within this tab: Brand Presets (curated and published by the Superadmin, shared platform-wide) and My Presets (built and saved privately by this company - see 4.5).

4.1 Categories

- Lower Thirds.
- Logo Circles / Badges.
- Callouts / Banners.
- Categories are manageable on the back end, so new ones can be added without a code release.

4.2 Browsing

- Search by name/tag.
- Preview thumbnail per preset.
- Filter by category.

4.3 Inserting a Preset

- Drag-and-drop or click to insert.
- Always inserted as one grouped object - it moves, resizes, and rotates as a single unit so it can't fall out of alignment by accident.

4.4 Editing a Preset

- Ungroup to edit - break it apart for full, piece-by-piece control; each piece then has the full Elements/Text/Photos editing toolset.
- Quick-edit shortcuts - double-click to edit pieces without fully breaking the group, plus smart jumps such as "Edit Title," "Edit Logo," or "Edit Name."

4.5 Save as Your Own Preset

- Turn any grouping you've built into a reusable preset.
- Stored in a personal "My Presets" tab, reusable across any frame or project.

5. Text

5.1 Adding Text

- Add a Heading, Subheading, Body Text, or blank Text Box.
- Font-pairing presets - one click inserts a matched heading-plus-body combo.

5.2 Fonts

- Browse by category - Sans Serif, Serif, Display, Handwriting, Monospace.
- Brand Fonts - custom uploaded fonts, pinned at the top.
- Font weight selector - only shows weights the chosen font actually supports.
- Font size - numeric input, stepper, or quick-pick sizes.

5.3 Formatting

- Bold / Italic / Underline / Strikethrough.
- Alignment - Left / Center / Right / Justify.
- Bulleted / numbered lists.
- Letter spacing, line height, indent/tab stops.
- Text color - solid or gradient.
- Superscript / subscript.
- Format Painter.
- Find & Replace across the whole document.
- Vertical text orientation.

5.4 Headers & Footers

- Define a Header and/or Footer layout for the document.
- "Apply to all pages" toggle - linked versus independent per page.
- Dynamic tokens - page number, total pages, date, document title.

Shared Across the Editor

- Universal Color & Fill - solid color (document/brand swatches, color wheel, hex, eyedropper) and gradients (linear/radial/conic, multi-stop, per-stop opacity) are available wherever color shows up: Elements, Photos, Presets, and Text.

4. Campaigns

- Campaign listing - Frame, Campaign Name, Tag Name, Type (WhatsApp/Email/SMS), Date & Time, Status.
- Row actions - Delete, View Campaign Logs.

Add Campaign Wizard

- Title.
- Select Frame - with a live preview of the selected frame.
- Select Audience - tag selection, with a live contact count that automatically excludes contacts who have opted out of the selected channel.
- Channel selection.
- Provider selection.

- Template selection, including the ability to fetch and add templates directly within new broadcast modal, with only Meta approved WhatsApp Templates shown before a template can be selected.
- Template variable mapping - using a custom value or a custom field.
- Test Send - send the personalized creative and message to one sample contact or test number, to confirm everything renders correctly before scheduling the full campaign.
- Review step - a full summary of the configured campaign, including credit deduction (matching the live estimate already shown in the Frame Editor), plus campaign scheduling (date, time, and timezone). Large audiences are sent with automatic rate throttling to stay within provider limits, and an estimated completion time is shown. Scheduling must be validated so a broadcast cannot be scheduled before the current time.

5. Wallet

Two tabs - Billing and Transactions.

5.1 Billing

- "Add Credits" button and popup - preset credit packages, or manual entry.
- Search bar.
- Download All Invoices - respects the active date range; delivered as a ZIP file containing all the individual invoice PDFs.
- Listing columns - Invoice ID, Particulars, Transaction Type, Status (actual payment gateway status), Credits, Date & Time.
- Row action - Download Invoice (a properly formatted PDF).
- Filter - date range.
- Low-balance alert threshold, with an optional auto-recharge toggle (saved payment method, trigger threshold, and top-up amount) so an active campaign is never interrupted by an empty wallet.

5.2 Transactions

- Shows only deducted-credit and refunded-credit entries.
- Search bar.
- Filter - date range.
- Download History - respects the active date range; exported as Excel (CSV).
- Listing columns - Transaction ID, Campaign Name, Transaction Type (WhatsApp/Email/SMS), Status, Transaction amount (credit/refund shown in green, debit/deduction shown in red), Date & Time.

5.3 Logs (Activity & Logs)

- System Activity - login success/logout events, IP address, date & time.
- Campaign Logs - campaign name, total contacts, Sent/Delivered/Read counts, status, date & time.
- Error Logs - detailed error message, date & time.

6. Channel Integration

Three tabs - WhatsApp, SMS, Email.

- "Add Provider" button.
- WhatsApp listing columns - Service Provider, WhatsApp Account Name, Phone Number ID, Date & Time.
- Add Provider popup - choice of BizzRiser, Wati, Interakt, AiSensy, DoubleTick, or Zapup - Base URL & End points must not be editable, we'll configure those things from Superadmin side.
- "Add New Template" - select the provider (e.g., BizzRiser, Wati).
- Template listing columns - Template Name, Image Type, Category, WhatsApp Service Provider, Date & Time.
- Row action - Delete.

7. Settings

7.1 Account

- The fields captured when the company was added (Company ID is locked and cannot be edited).
- Timezone.
- Sign-out option.
- Notification history.

7.2 Team & Access Management

Lets a company invite internal teammates to share access to its BizzEngager account, each with a defined permission level.

- Listing - Name, Email, Role, Date Added, Last Login.
- Row actions - Edit, Deactivate, Delete.
- Search bar and "Add Team Member" button.
- Add Team Member popup - Name, Email, Role (e.g., Manager, Campaign Editor, Viewer), with permission scope mirroring the platform's modules (Contacts, Frames, Campaigns, Wallet, Channel Integration).
- Role management button

- Roles listing - Role name, number of users associated with that role, Role added Date&time, Action buttons - Edit, Delete

7.3 Security

- Change password - requires the current password plus an email OTP confirmation.
- Two-Factor Authentication (2FA), supporting both email verification and an authenticator app (TOTP) option.

7.4 Integrations

- An API key, with full documentation for every API endpoint and usage examples, in the style of BizzRiser's own native documentation.
- The same documentation will also be listed directly on the platform's own Integrations page.
